A PROJECT OF
CHAMPIONS for CHILDREN:
PREVENT CHILD ABUSE in HAMPTON ROADS

CHANGING THE CONVERSATION.
CHANGING LIVES.

NO HIT ZONE
Caring Communities • Healthy Kids™
The No Hit Zone campaign aims to educate the public about the risks associated with hitting a child as punishment.

The No Hit Zone campaign provides public notice that hitting is not acceptable in the “zone” designated as a **No Hit Zone**.

**OUR VISION**

A community where healthy child development is supported through safe and effective interpersonal interactions that do not involve hitting. A **No Hit Zone** is a setting that establishes an environment of care and health in which:

1. No adult shall hit another adult. No child shall hit an adult.
2. No adult shall hit a child. No child shall hit another child.
3. The No Hit Zone campaign aims to educate the public about the risks associated with hitting a child as punishment.
4. The No Hit Zone campaign provides public notice that hitting is not acceptable in the “zone” designated as a **No Hit Zone**.

**HISTORY OF THE NO HIT ZONE**

**No Hit Zone**, as a preventive initiative, was birthed in pediatric hospital settings across the nation in 2005, when Lolita McDavid MD, professor of pediatrics at Rainbow Babies and Children’s Hospital in Cleveland, Ohio, created the concept. The University of Louisville—Norton Health Care systems is also recognized as an early **No Hit Zone** champion following their 2012 implementation. Since its beginning, the **No Hit Zone** initiative has expanded beyond the walls of hospitals and is moving throughout the country as an abuse prevention effort.
ELEMENTS OF NO HIT ZONE

The No Hit Zone campaign provides friendly and directly stated posters for wall display that define the No Hit Zone rules. These posters, display sheets and visual aids are used in prominent locations in the No Hit Zone so that staff members may refer to them as the rules in the Zone and so that adults and children can read the rules as they enter a No Hit Zone.

The No Hit Zone campaign involves the training of staff at participating sites on nonviolent conflict resolution skills and supportive communication. These staff members will be able to intervene compassionately during parent/child interactions that might potentially lead to physical punishment. The goal of the No Hit Zone campaign is to create designated public spaces that clearly show and promote the idea that physical aggression towards children (or anyone) should not be allowed and that non-physical alternatives are effective.

The No Hit Zone campaign provides distraction kits—safe and interesting toys and books for children that can be used by staff when they intervene in a potentially troublesome adult/child interaction. One distraction kit is distributed to each launch site and is stored in a central location to be used as needed. The kit is kept supplied with a variety of safe, new objects for various age ranges.

The No Hit Zone campaign is completely mobile and is implemented on a site-by-site basis. To be a No Hit Zone participant, an agency first requests information from Champions For Children: Prevent Child Abuse Hampton Roads and demonstrates readiness for the campaign through preliminary interaction and discussion with the project lead Champions site.
LEADING NATIONAL SOURCES ON HITTING PREVENTION

The American Academy of Pediatrics (AAP) strongly opposes striking a child for any reason. Spanking is never recommended; infants may be physically harmed by a parent who strikes the child” (2015, American Academy of Pediatrics). The AAP does not support hitting a child due to the long-term impact on mental, physical and emotional wellbeing. However, many times adults feel that there are no other alternatives available or they are unaware of the potential effects of their actions. Education and awareness regarding alternatives to and the effects of physical punishment are very much needed.

Canadian studies indicate that 69-75% of substantiated child physical abuse occurred during episodes of physical punishment. Further, children who were spanked by their parents are seven times more likely to be severely assaulted (punched, kicked) by their parents than children who were not spanked.¹

The Centers for Disease Control (CDC) has stepped up in support of shifting the norm from physical punishment of children to non-physical positive discipline approaches. The CDC in their Technical Report on Preventing Child Abuse and Neglect (2016)² calls for educational and awareness-raising efforts designed to change social norms related to child discipline.

“One social norm that is particularly relevant to preventing child abuse and neglect relates to how parents discipline their children. Another has to do with whether it is appropriate for parents to seek help in parenting.” (p. 18, CDC Report)

The No Hit Zone initiative contributes to addressing both of these norms: first by making the “no hitting” message clear and publicly visible and second by modeling and supporting positive discipline efforts.

BENEFITS

When organizations participate in the No Hit Zone campaign, good things happen. There is supportive and helpful intervention in times of stressful and potentially physical interactions.

Focus is placed on the prevention of hitting and on providing support to parents and caregivers during early signs of distress. Supportive intervention can reduce a problem and can promote positive alternatives to physical punishment.

A non-physical positive model is presented to both adults and children. Children learn by watching adults and by interacting with adults. Adults should model positive ways to work through difficult times and conflicts.

The message of the negative effects of hitting/physical violence is communicated. Hitting can be prevented and is harmful to physical, emotional and mental health. The precepts of the No Hit Zone work to prevent hitting a child as a form of punishment, hitting because of sibling conflict, bullying, elder abuse, and other forms of adult violence.

Ultimately, as physical punishment and physical interactions are reduced, the chance of the physical abuse of children is reduced.

THE CHAMPIONS FOR CHILDREN NO HIT ZONE PROJECT

Champions For Children: Prevent Child Abuse Hampton Roads is committed to implementing the No Hit Zone philosophy on a local level, so that high-quality campaign materials, top-quality training of participants and modeling of positive behavior is present throughout project implementation. This is done by:

1. Providing education on current research findings on physical punishment of children. Dr. Elizabeth Gershoff, a leading national researcher in this field, visited Hampton Roads in January 2017 as a CFC: PCAHR guest. She presented her findings to several local child advocacy groups and to individuals who are working to become trainers for the program. Trained professionals will educate No Hit site staff members in these findings and in positive intervention techniques.

2. Promoting No Hit environments with No Hit signs and posters and other printed items. The lead poster has been designed, printed and distributed to the first launch sites in Hampton Roads. Posters are provided for each launch site along with distraction kits that can be used when problematic interactions in No Hit Zones occur.
LEVELS OF IMPLEMENTATION OF NO HIT ZONE: WHO GETS WHAT?

Staff Members  Staff training on nonviolent conflict resolution skills and supportive communication will improve the prevention of hitting and will reduce problems through effective intervention. The Champions No Hit Zone training was developed by Kelly Dauk, MD, University of Louisville, and provides an overview of the No Hit Zone campaign and its learning activities. It will enhance the implementation of supportive interventions.

Families  Information on effective positive parenting and regional parenting programs in Hampton Roads will be available for parents at each launch site. Staff members will have access to parenting information and will support family members in finding the best option and encouragement when parents seek help.

Communities  Work will be undertaken to expand the presence of No Hit Zone sites by providing education and support at strategic locations throughout the Hampton Roads region to promote our area as caring and healthy community—a “best place” to live.

Municipalities  This is typically a last and formal phase and moves the campaign to a formal community initiative level. For example, a resolution supporting the No Hit Zone campaign could be adopted by vote from a City Council at a municipal level. This action might then result in the municipality taking forward its own No Hit Zone plan, thus expanding the campaign in a comprehensive manner.

NO HIT ZONE IN HAMPTON ROADS

The momentum for a local No Hit Zone initiative is growing! There has been so much interest and energy that the Champions For Children: Prevent Child Abuse Hampton Roads (CFC: PCAHR) is gearing up to extend the No Hit Zone campaign in order to turn Hampton Roads into a “No Hit” region.

Recently, through cooperation with In Support of Children student organization at ODU, many of our area’s advocacy, human services and public health groups were educated by nationally recognized No Hit Zone leaders from Dane County Wisconsin, the University of Texas, Austin, the University of Louisville, Norton Health Systems, and the University of Manitoba. They presented research findings and information on No Hit Zone to potential stakeholder groups in Hampton Roads.

Public agencies that provide waiting areas for parents and children and/or extended families are great places to implement a No Hit Zone. Medical and public health facilities are a first-line agency due to the information medical professionals are equipped with and their established respect in the community.

The No Hit Zone campaign will be promoted in these agencies and then expand to other sectors such as municipal offices, libraries and retail locations.
CURRENT NO HIT SITES IN HAMPTON ROADS

January 2017  General Academic Pediatrics, CHKD
April 2017    Chesapeake Health Department
July 2017     Department of Human Services, Chesapeake
August 2017   Chesapeake Regional Medical Center – Mother/Baby, Emergency Department
March 2018    Harbor Point Behavioral Health Center, Portsmouth

CHIP of South Hampton Roads
REACH (Reading Enriches All Children)

Upcoming Launch Sites in Hampton Roads
First Home Care, Portsmouth
Norfolk Department of Human Services, Norfolk

GETTING INVOLVED!

To get involved with the No Hit Zone campaign, launch sites will need to provide the following:

- Space for planning meetings
- A site leader for coordination of the campaign including the campaign launch
- A site media specialist, if available, for site-based promotion (based on site preferences)
- Training space with PowerPoint/DVD set up for staff trainings
- A site campaign coordinator designated for follow-up and support to maintain continued project quality

Champions will provide the organization with:

- Preliminary information on the No Hit Zone campaign and the established research findings on the effects of physical punishment
- Several planning sessions with each site on the various aspects of the campaign and best options for implementation at that site
- Signs for site implementation, indicating the rules of No Hit Zone, to be displayed on site in prominent locations
- Educational materials for staff members, parents and advocates of the No Hit Zone
- Staff training and/or trainer training for No Hit Zone implementation and follow-through
- Launch assistance dependent upon launch site needs and preferences
- Continued communication with a site designated No Hit coordinator to ensure the program's success and integrity

Champions For Children: Prevent Child Abuse Hampton Roads
RESEARCH ON PHYSICAL PUNISHMENT

According to research, physical punishment increases the risk of harm to a child’s overall development. Meta-analyses by Dr. Elizabeth Gershoff and Dr. Andrew Grogan-Kaylor reviewed more than 100 studies involving more than 160,000 individuals and identified significant relationships between physical punishment (including spanking) and:

- Increased aggression and delinquent behaviors
- Decrease in supportive parent-child relationships
- Decreased child mental health
- Increased physical abuse of children
- Increased adult aggression and criminal behaviors
- Decreased adult mental health
- Increased risk of abusing spouse or child as an adult

Physical punishment may seem to stop problematic behavior in the moment; however, the use of physical punishment does not promote long-term learning or the building of necessary self-management skills. The use of physical punishment, such as spanking, is often a reactive response of adult frustration or anger. Even though research strongly points to physical punishment as a risk factor for increased physical, mental and emotional health problems, the practice of spanking a child as discipline remains an accepted practice.

Using data from the General Social Survey, Child Trends reports: “Between 1986 and 2014, the proportion of women who agreed or strongly agreed that it is sometimes necessary to give a child a “good, hard spanking” dropped by 22 percent (from 82 to 65 percent). While approval among men dropped seven percent between 1986 and 1991 (from 84 to 78 percent), it has since remained steady, and was at 76 percent in 2014.” (Child Trends Data Bank) ‘Attitudes toward Spanking, November, 2015)

It is time to increase awareness and educate our citizens on the long-lasting effects of hitting children and on the range of positive alternatives. It is time to change the conversation in Hampton Roads!

3 Physical punishment is defined as the use of some form of physical pain in response to an undesirable behavior. Physical punishment includes spanking a child with the hand or object.

Champions For Children: Prevent Child Abuse Hampton Roads is
a 501 (c) 3 organization that has served the Hampton Roads region
since 1983 in the quest to prevent child abuse and neglect. Cham-
pions For Children focuses its efforts and resources on awareness,
education, and advocacy for the prevention of all forms of child
abuse and neglect.
